World of Product Engineering

ABSTRACT

„Partner Country Japan“

A new technology is always necessary for space development. The space technology has possibility to develop as the field of new business. Space development organization, without any exception, continue developing new technologies in the fields of space development and applying them to the non-space fields.

It will be brought the benefit to each country economy and our lives on Earth by this SPIN-OFF activity.

JAXA has started to build up partnerships with the private sector to facilitate the transfer of JAXA developed technologies. The theme of JAXA's Industrial Collaboration is to decrease a hurdle to join in space activity and to extend a field of market by transferring space technology to non-space field.

As one for this purpose, JAXA performs the activity which aims at supporting non-space sectors as user of space technology. Through this activity, JAXA aims not only to reinforce the competitive power of Japanese industry but also to be able to do our life comfortably.

I will introduce JAXA's activities and some success examples.
